

Instructions for installing Links Storage software

In recent years, due to the complicated covid epidemic situation, schools have had to switch to online learning on platforms such as teams, zoom, etc. Accompanying that is a mass of video record links to lectures, textbooks, test materials,... etc., making it extremely important to store and organize these links so that they can be easily accessed and controlled. There are many ways you can store links, such as using word processing software like word or notepad, or using browser features like favorites. However, the above methods clearly show the disadvantage that it is difficult to arrange links by topic as well as control links in large numbers. From the above fact, I have developed link storage software to help people no longer feel that link storage is a nightmare like before :3.

Please follow a few simple steps below to be able to install and experience Links Storage software.

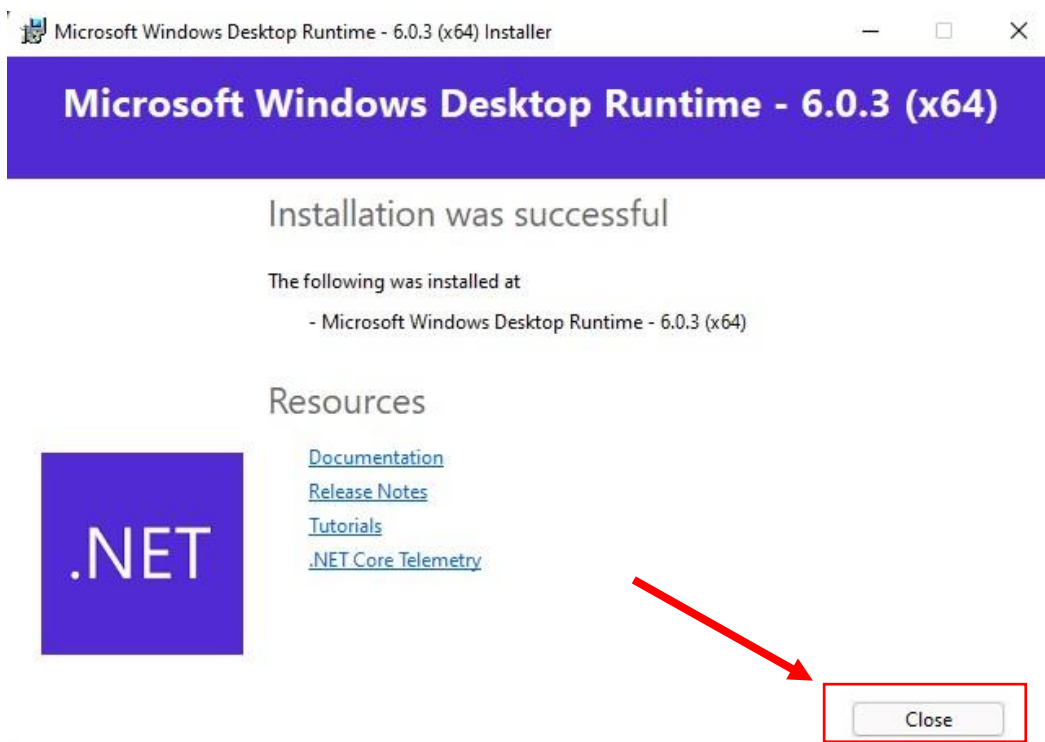

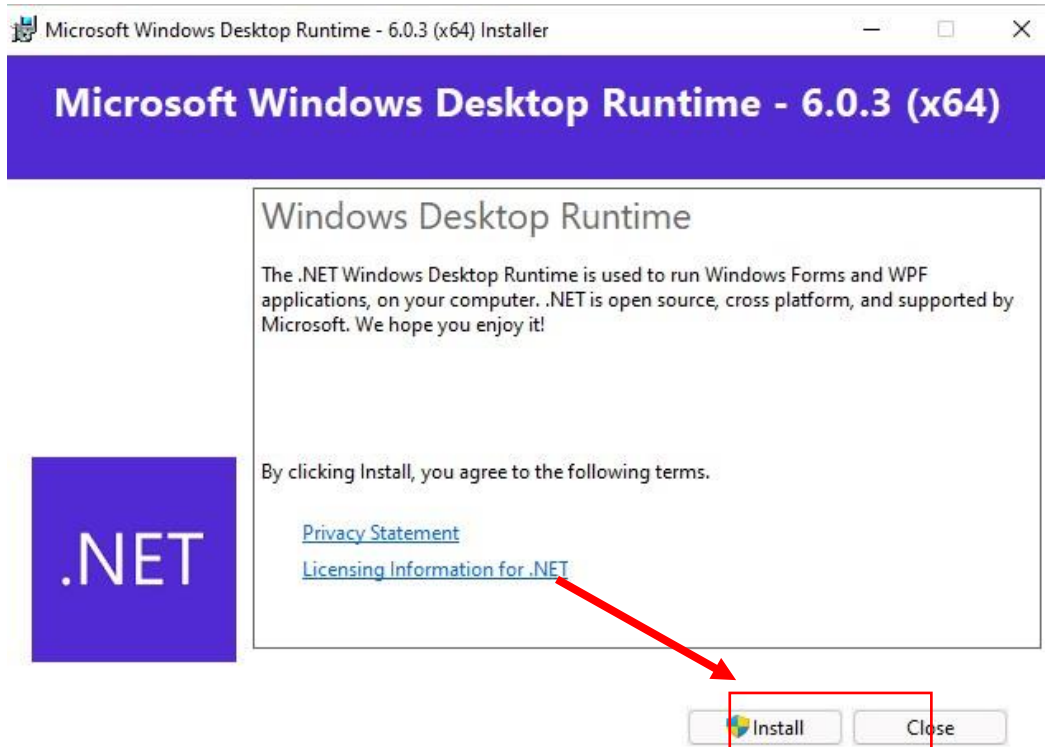

1. Instructions for downloading software to your device

- You can access the 2 links below to download the software installation file:

Link One driver: <https://bitly.com.vn/we8st7>

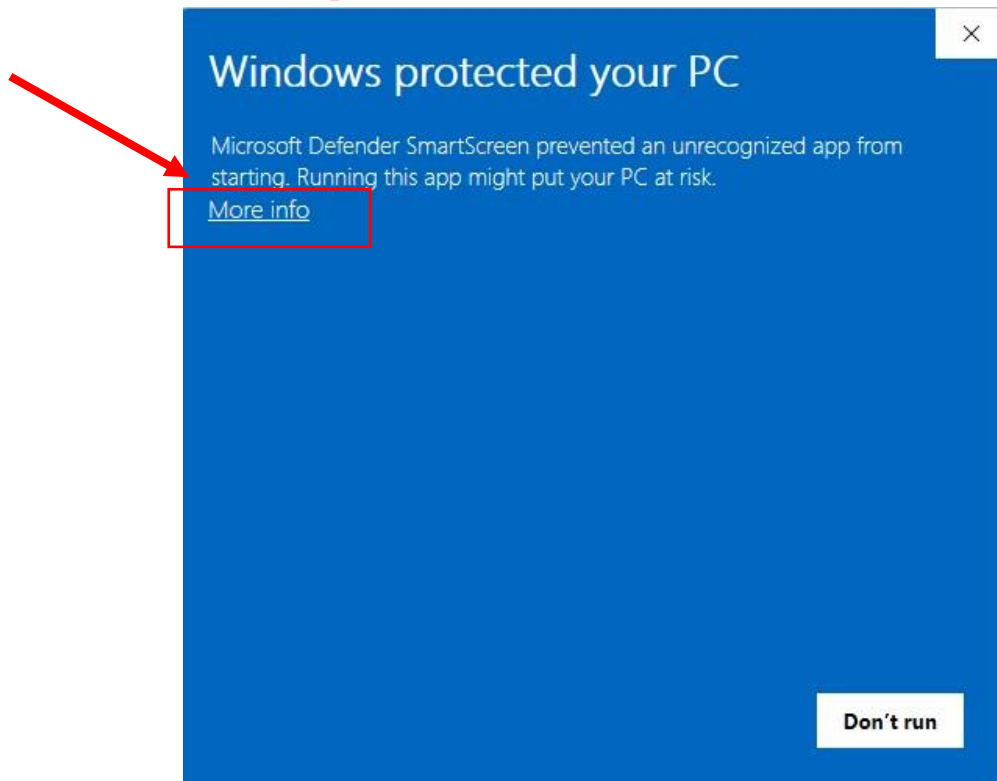

Link Google driver: <https://bitly.com.vn/df3gam>

After downloading the installation file (.rar), proceed to extract. In the folder after extracting, there will be 2 files to install, which are .NET 6.0 files, and storage links files. **First of all, let's install the windowsdesktop-runtime6.0.3-win-x64 file.exe first.**

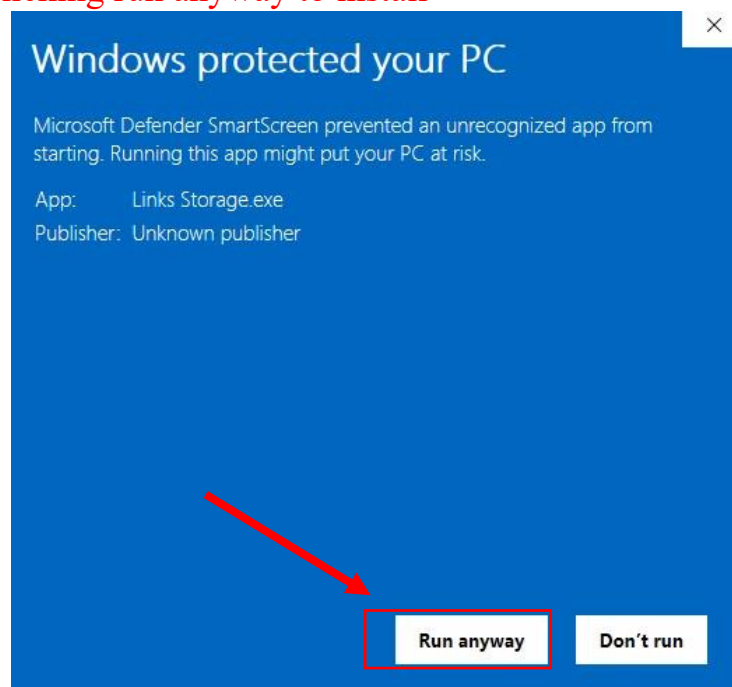

2. Install the setup links storage file

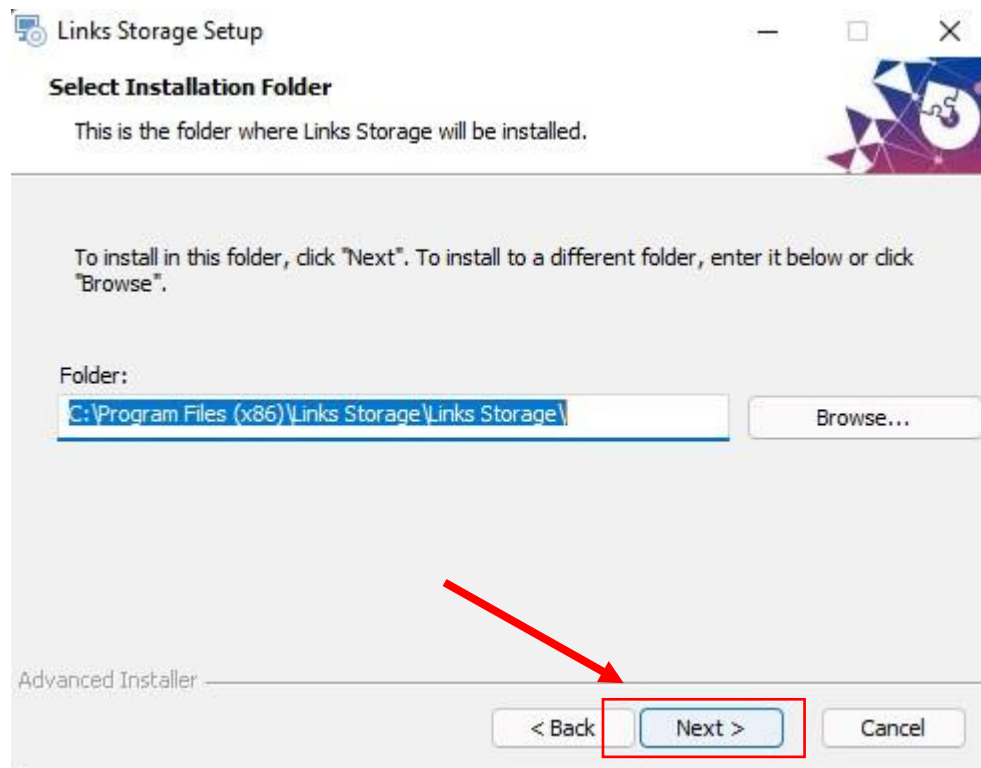

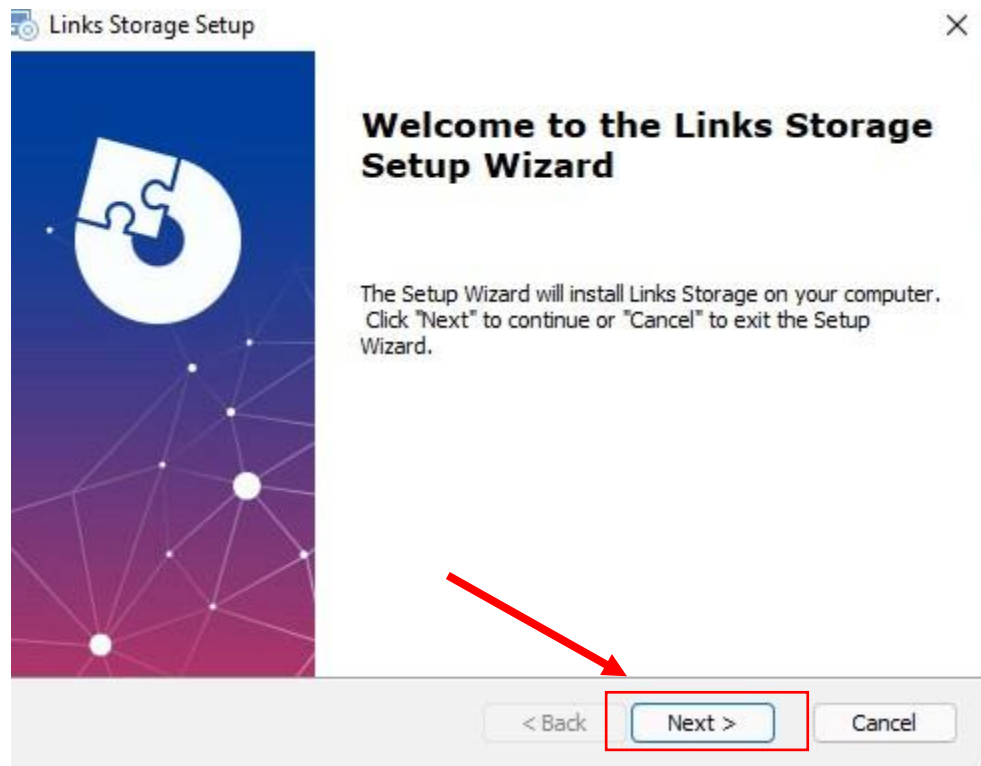

- Because I did not register for msc certificate, when installing the software, Windows defender will notify (as shown below). **Please click on more info to proceed with the installation.**

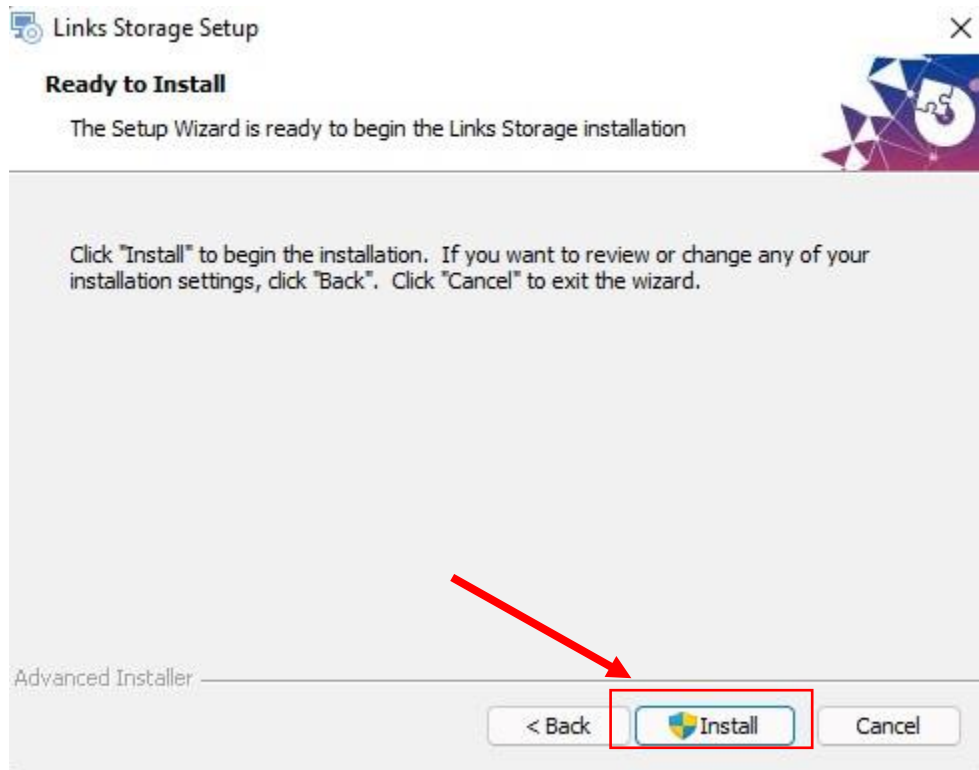

- **Keep clicking run anyway to install**

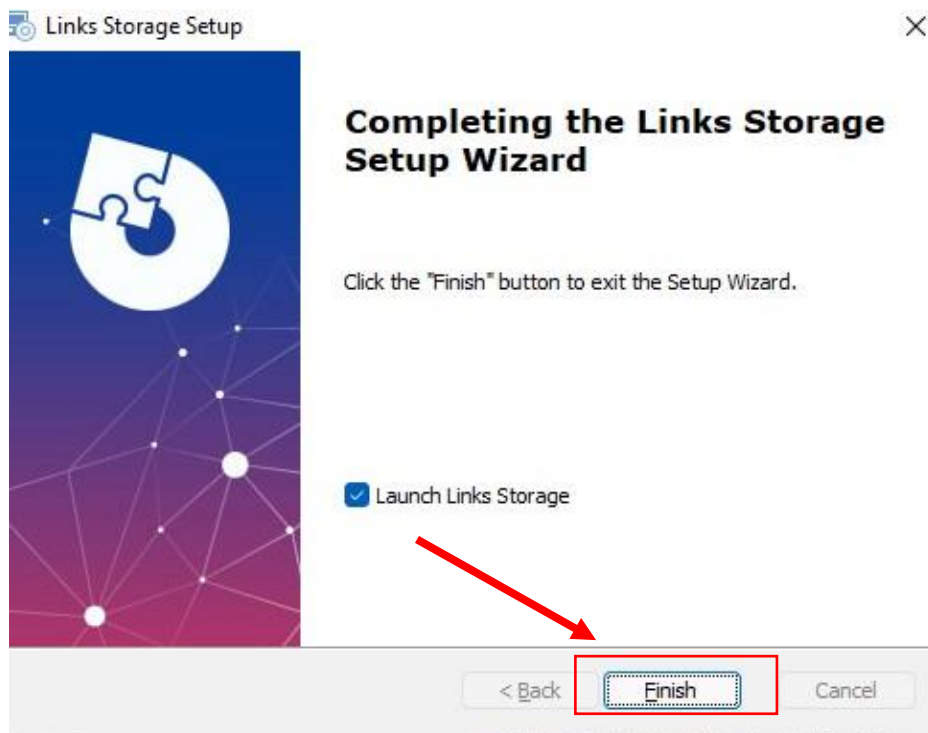

- At this time, the installation interface of the storage installer links will appear, **please click next continuously** ^{^^}

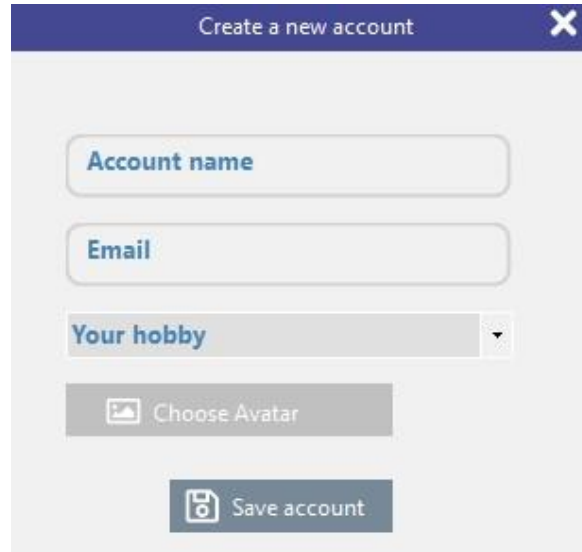

- At this point, click finish to start experiencing the software.

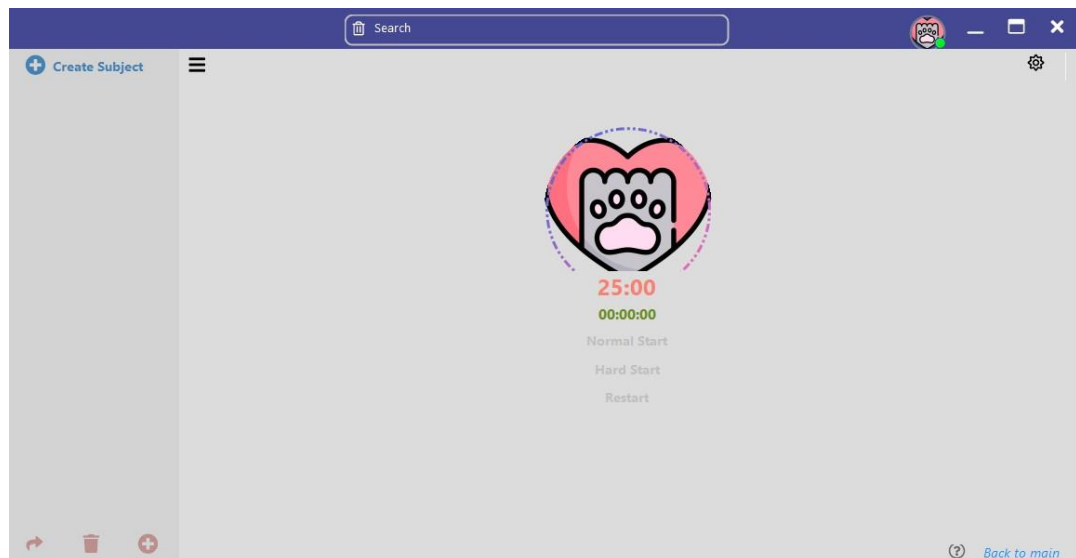

3. Introduction to the software interface

- At the first run, the software will ask you to enter information such as account name, email address, hobbies (let me tell people what to do) and finally a beautiful avatar photo.

The image shows a 'Create a new account' dialog box with a dark blue header and a close button (X) in the top right corner. The form contains four input fields: 'Account name', 'Email', and 'Your hobby' (which is a dropdown menu), followed by a 'Choose Avatar' button with a camera icon. At the bottom is a 'Save account' button with a floppy disk icon.

- After saving, the main interface of the software will appear

- Voltage stabilizer interface, please follow my facebook to know more interesting features of the software (link below)
